NORTHERN BRITISH COLUMBIA

Air Quality Science - MSC

- Focus is Prediction and Services for Air Quality
- Prediction
 - Producing better model results through data ingestion and validation
- Services
 - Provide information about AQ events to public, media, agencies and other departments

Air Quality Science - MSC

3 regional Air Quality Science Units

- West (BC, AB, SK, MB, NU, NT YK)
- Central (ON, QC)
- Atlantic (NB, NL, NS, PE)

National Health and Air Quality Group

- Responsible for AQHI
- Policy related to AQHI

AQSU - West

Head – Keith Jones

Senior Research Scientists

- Corinne Schiller
- Julie Narayan
- Dan McLennan (Acting)

Research Scientists

- Brayden Nilson

Senior Air Quality Technician

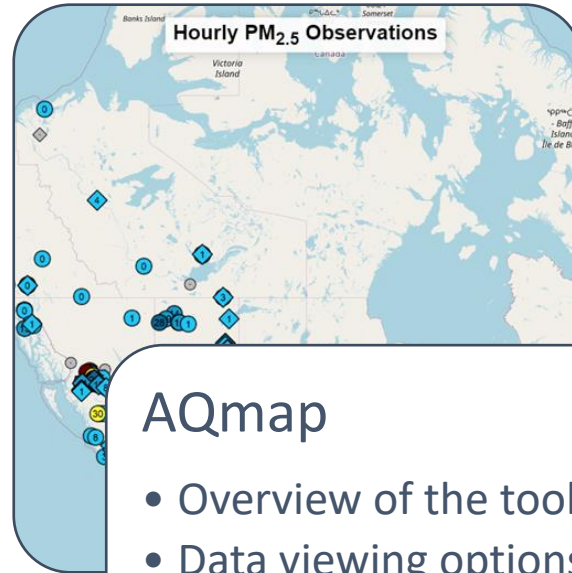

- Chris Nayet

I will provide an overview of the Low Cost Monitors (LCMs) we work with, how you can use our web-tool to view them, and an example of their benefits

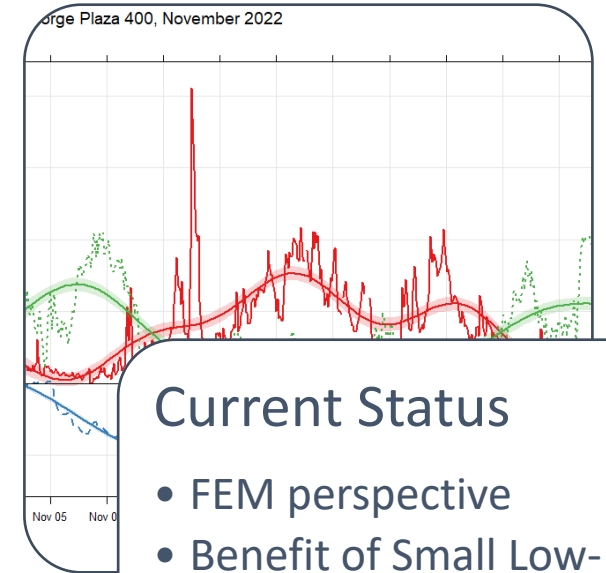

Introduction

- Fine particulate matter (PM_{2.5}) monitoring
- Low Cost Monitors (LCMs)
- Comparability of data (FEM vs LCM)

AQmap

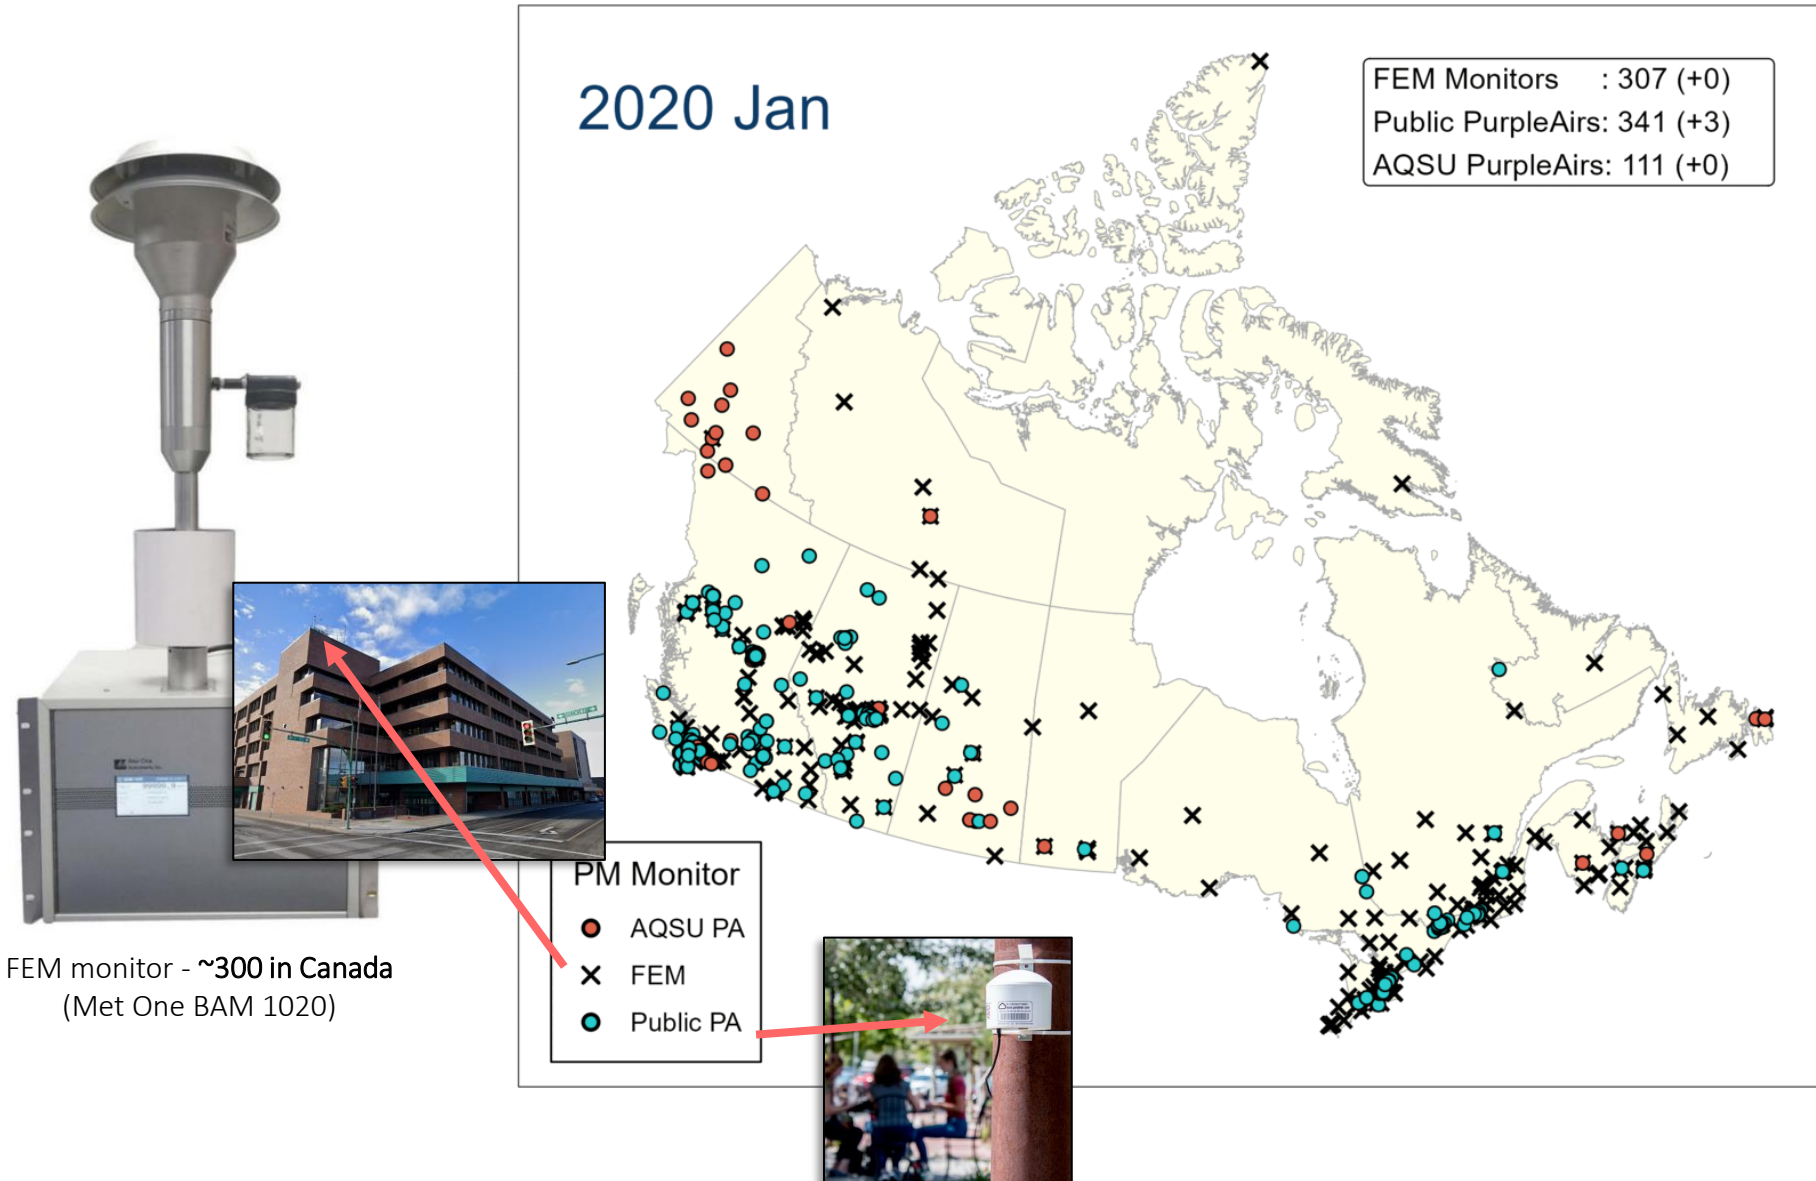

- Overview of the tool
- Data viewing options
- History

Current Status

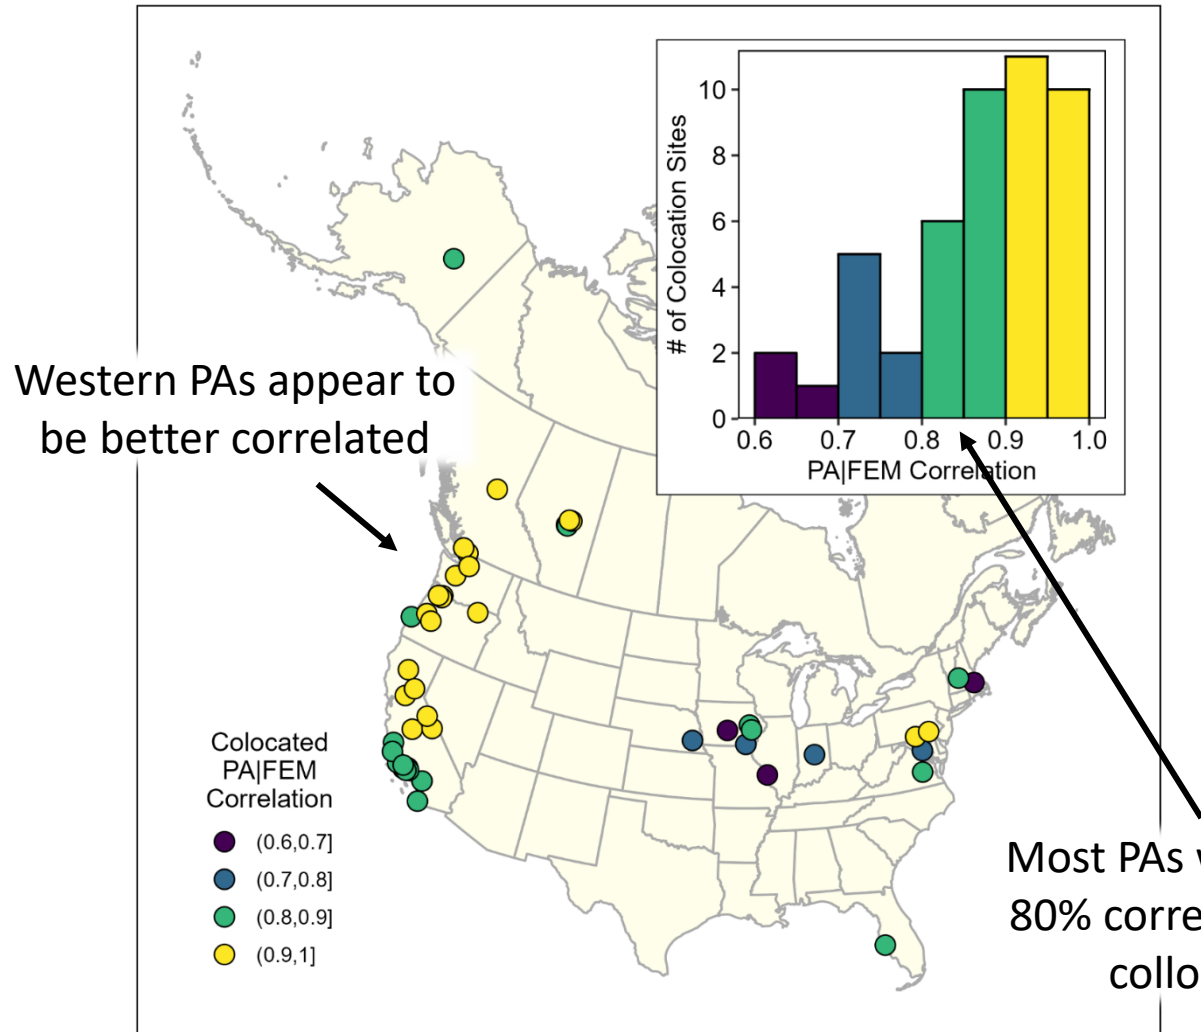

- FEM perspective
- Benefit of Small Low-Cost PM Monitors

$PM_{2.5}$ is measured on an hourly basis using a network of regulatory (FEM) monitors. LCMs can provide higher-density data at a lower cost

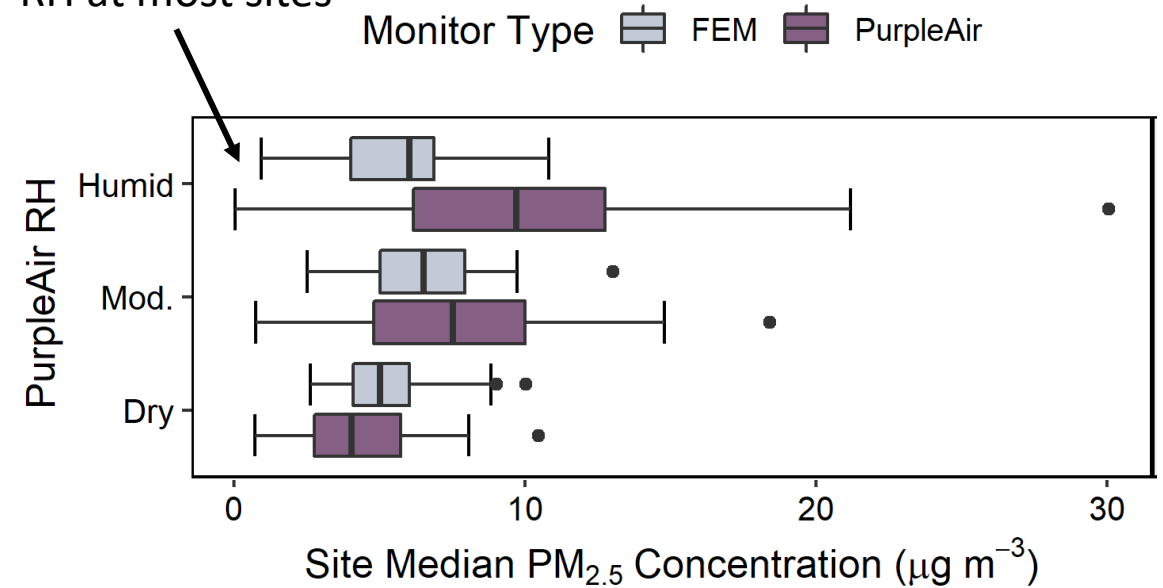

PurpleAir LCM - ~1300 in Canada
(2x Plantower PMS5003)

The PurpleAir LCMs correlate well with regulatory FEM monitors, but tend to be biased high as humidity levels increase

Bias increased with RH at most sites

Our recent publication developed a general-use bias correction for the PA monitors in CAN/USA which significantly improves the PA data

Atmos. Meas. Tech., 15, 3315–3328, 2022

Correspondence: Brayden Nilson (brayden.nilson@ec.gc.ca)

Received: 15 December 2021 – Discussion started: 18 January 2022

Revised: 16 April 2022 – Accepted: 27 April 2022 – Published: 3 June 2022

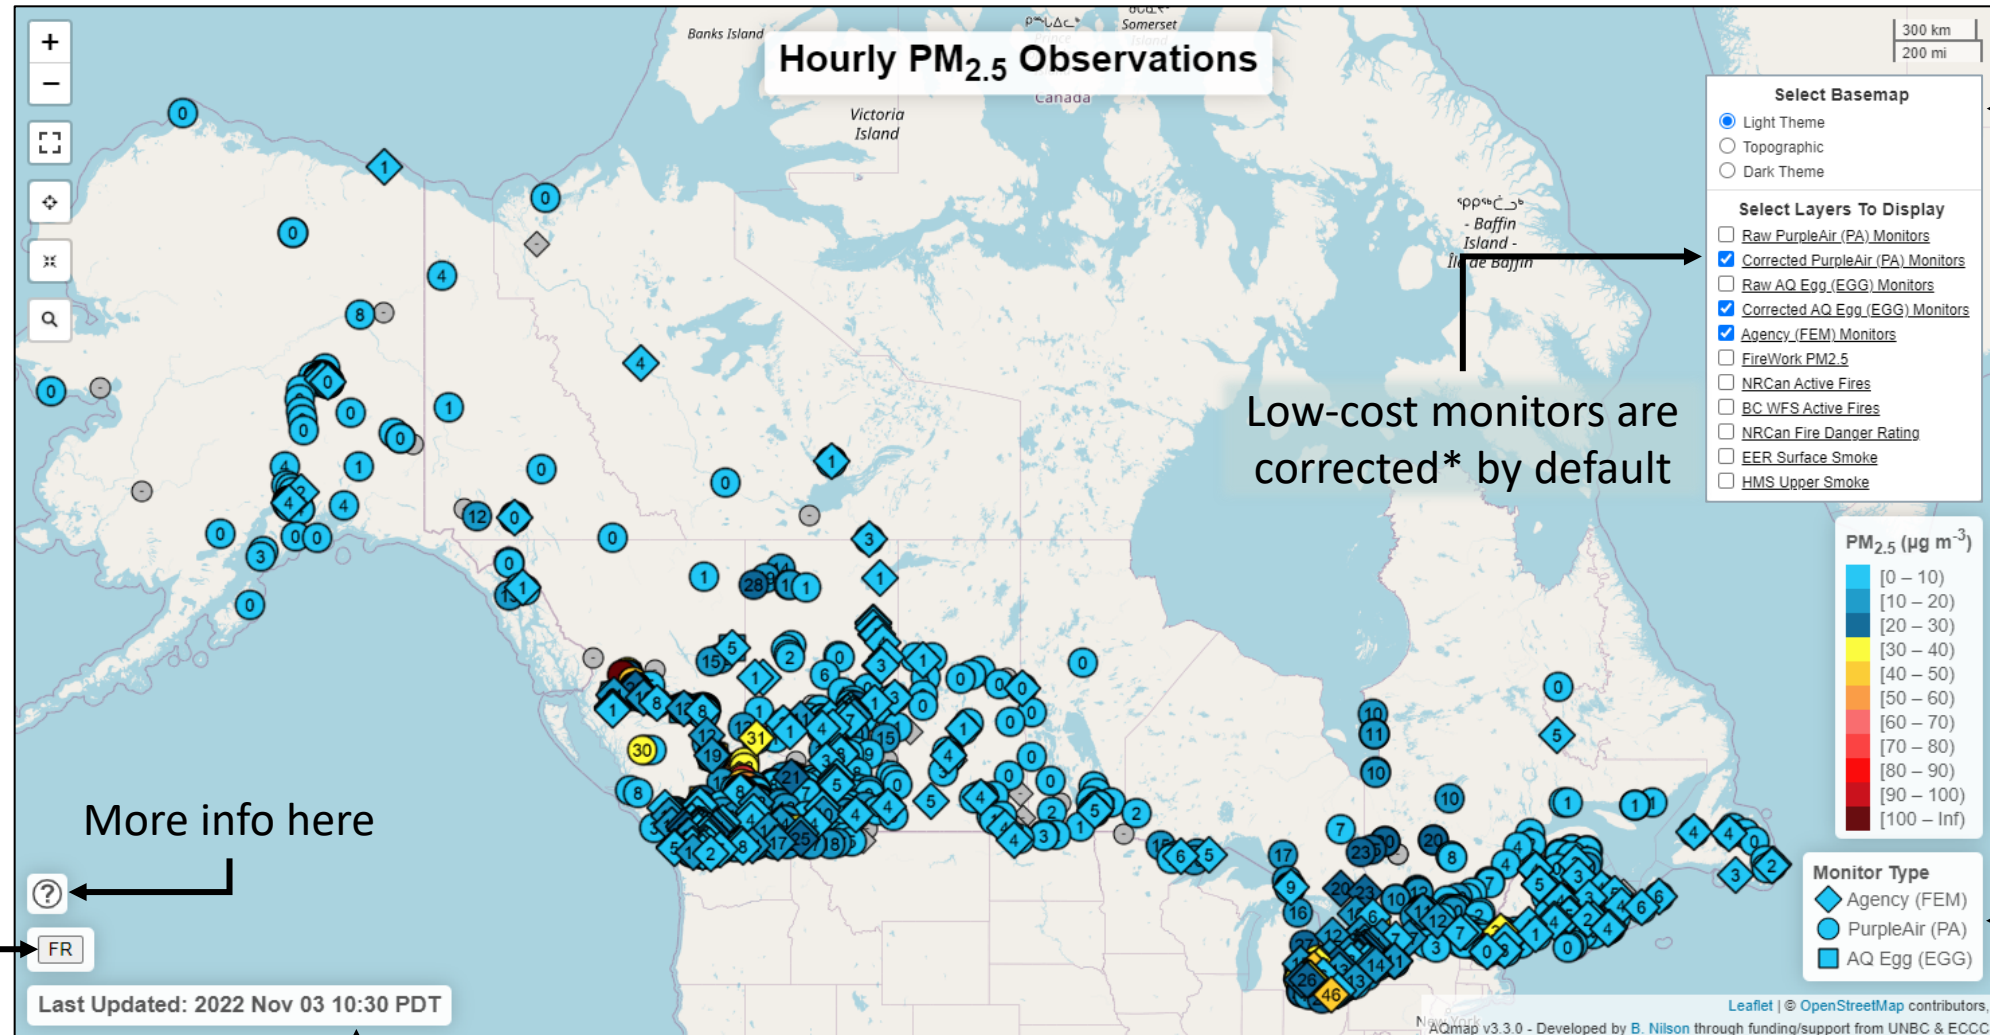

Our correction brings PA obs to within half of an AQHI+ unit ($\sim 5 \mu\text{g m}^{-3}$) from collocated FEMs (on average)

We developed “AQmap” to display real-time $\text{PM}_{2.5}$ in Canada from both FEMs and LCMs

<https://aqmap.ca/aqmap/>

Extra smoke-related layers

Low-cost monitors are corrected* by default

Regulatory AND low-cost monitors

Updated every 10 minutes

Anyone can use this tool to see areas currently impacted by high PM_{2.5}

Plotted data can
be downloaded
from this menu

UNBC-PA32 (Zoom to Monitor)

1 Hour Average Between 0 - 29.9 $\mu\text{g m}^{-3}$ (Low AQHI+):
General Population - Ideal air for outdoor activities.
At Risk - Enjoy usual outdoor activities.

Monitor: Corrected PurpleAir (PA) Last Obs.: 2022 Nov 03 10:20 PDT

Past 10-min: 13.6 $\mu\text{g m}^{-3}$ Past 1-hr: 13.6 $\mu\text{g m}^{-3}$

Past 3-hr: 14 $\mu\text{g m}^{-3}$ Past 24-hr: 7.5 $\mu\text{g m}^{-3}$

UNBC-PA32

Raw & Corrected Hourly Average PA PM_{2.5} (Past ~2 Months)
Compared with PRG PLAZA 400 (FEM ~1.01 km Away)

Highcharts.com

PRG PLAZA 400 (Zoom to Monitor)

1 Hour Average Between 0 - 29.9 $\mu\text{g m}^{-3}$ (Low AQHI+):
General Population - Ideal air for outdoor activities.
At Risk - Enjoy usual outdoor activities.

Monitor: Agency (FEM) Last Obs.: 2022 Nov 03 09:00 PDT

Past 1-hr: 8.3 $\mu\text{g m}^{-3}$ Past 3-hr: 7.3 $\mu\text{g m}^{-3}$

Past 24-hr: 7.8 $\mu\text{g m}^{-3}$

[Plot Timeseries](#)

PRG PLAZA 400

Hourly Average FEM PM_{2.5}

Date Range to Display (PDT): 2022-10-21 11:00 - 2022-11-03 11:00

AQSU-B783 (Zoom to Monitor)

1 Hour Average Between 30 - 59.9 $\mu\text{g m}^{-3}$ (Moderate AQHI+):
General Population - No need to modify your usual outdoor activities unless you experience symptoms such as coughing and throat irritation.
At Risk - Consider reducing or rescheduling strenuous activities outdoors if you are experiencing symptoms.

Monitor: Corrected PurpleAir (PA) Last Obs.: 2022 Nov 03 10:10 PDT

Past 10-min: 48 $\mu\text{g m}^{-3}$ Past 1-hr: 48 $\mu\text{g m}^{-3}$

Past 3-hr: 33.8 $\mu\text{g m}^{-3}$ Past 24-hr: 7.9 $\mu\text{g m}^{-3}$

[Plot Timeseries](#) [Compare Sensors A/B](#) [Compare w/ Nearby FEM](#)

AQSU-B783

Corrected Hourly Average PA PM_{2.5}

Date Range to Display (PDT): 2022-10-21 11:00 - 2022-11-03 11:00

AQmap is especially useful for locating surface smoke from wildfires

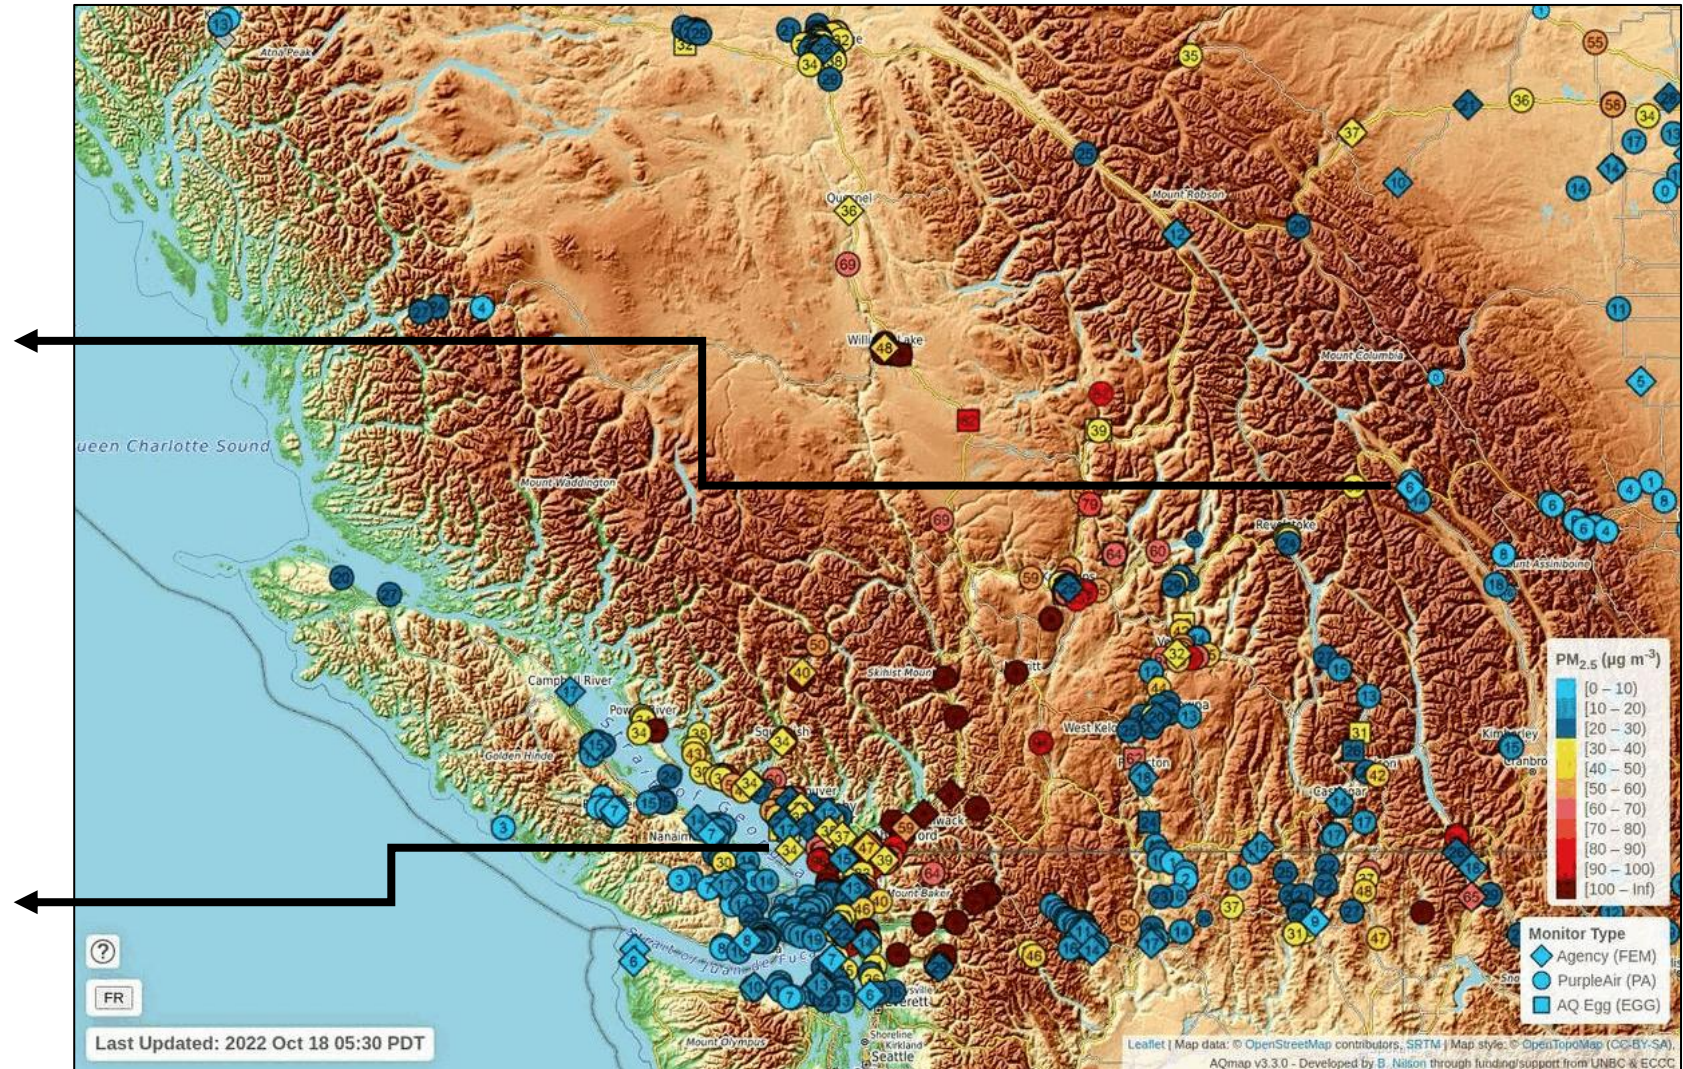

GOLDEN HOSPITAL HELIPAD

Hourly Average FEM PM2.5

TSAWWASSEN

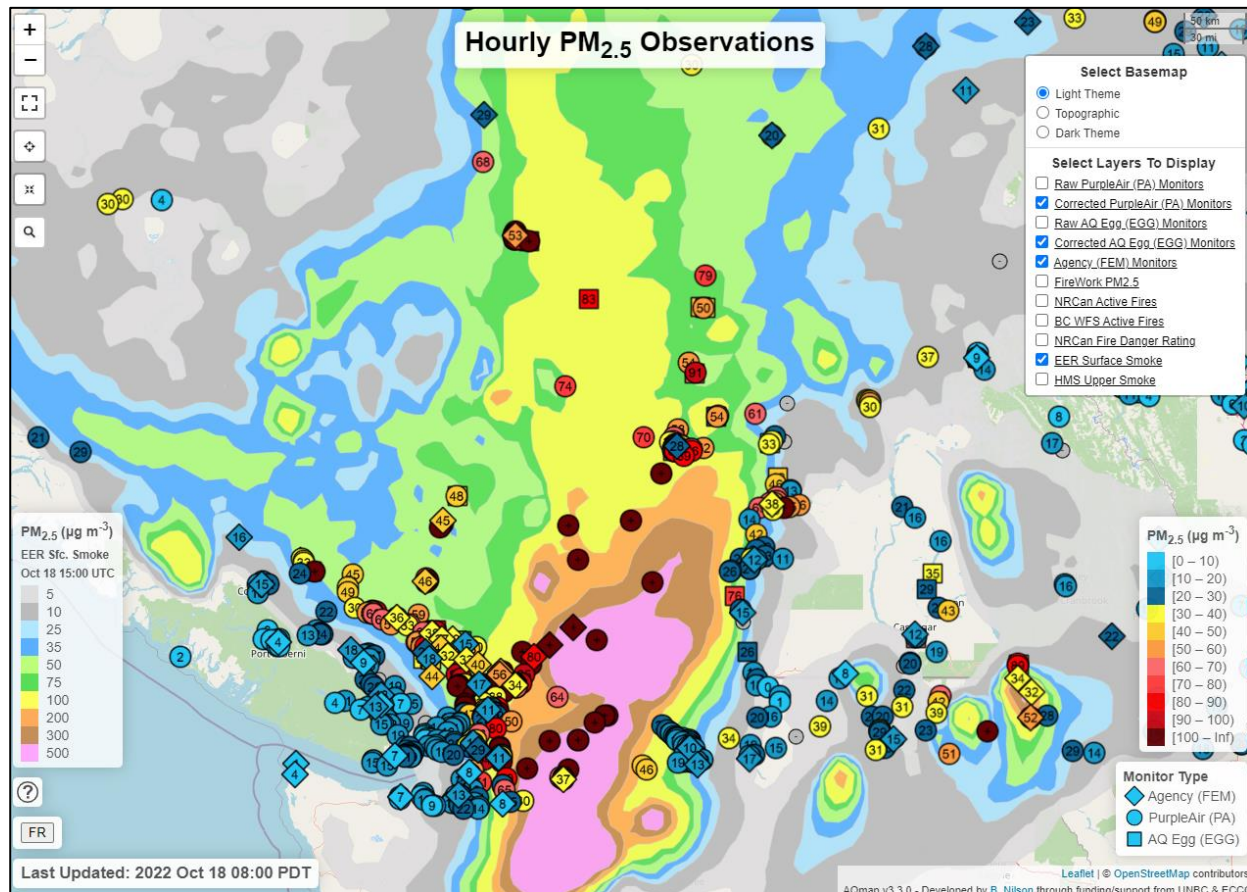

Hourly Average FEM PM2.5

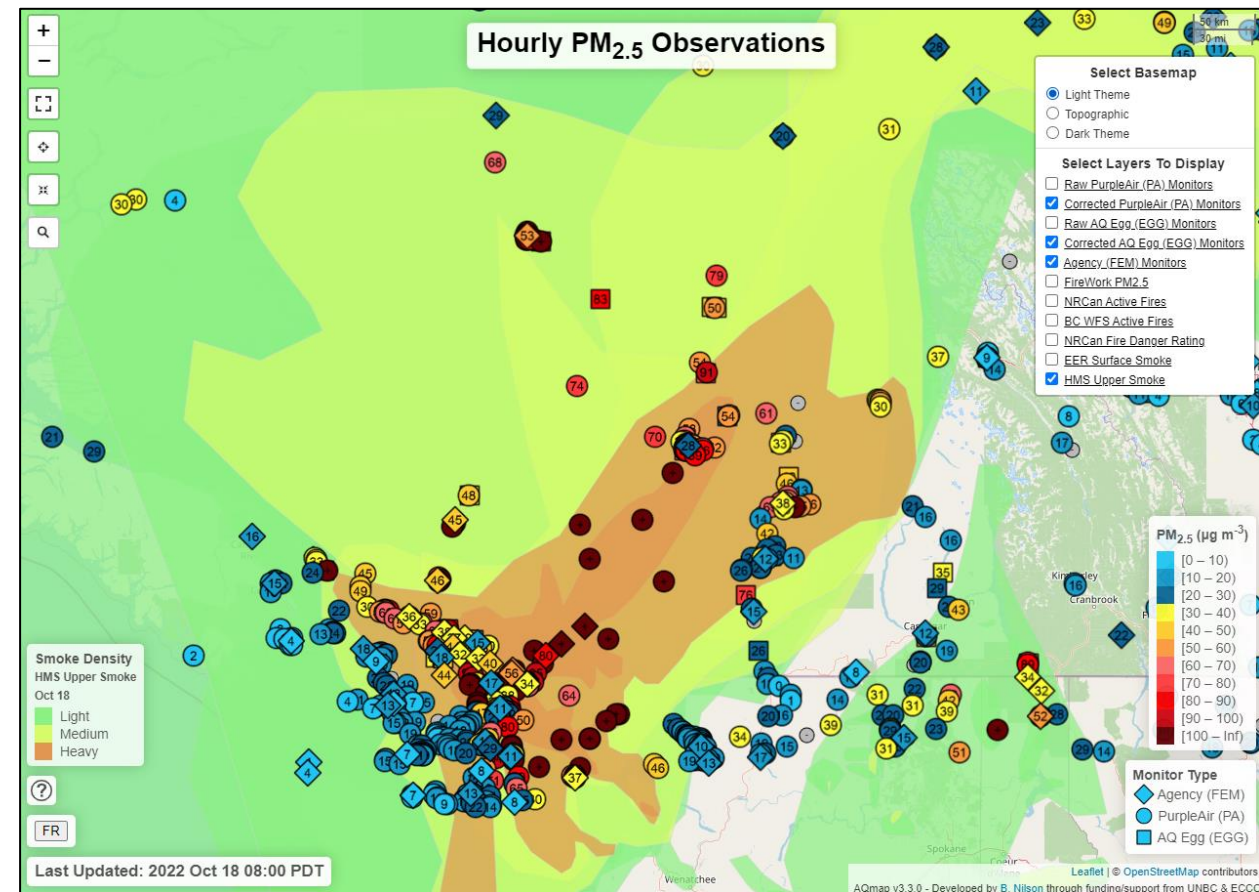

Oct 18, 2022 5:30 – 16:30 (PDT)

Additional data layers can be used to improve spatial awareness during wildfire smoke events

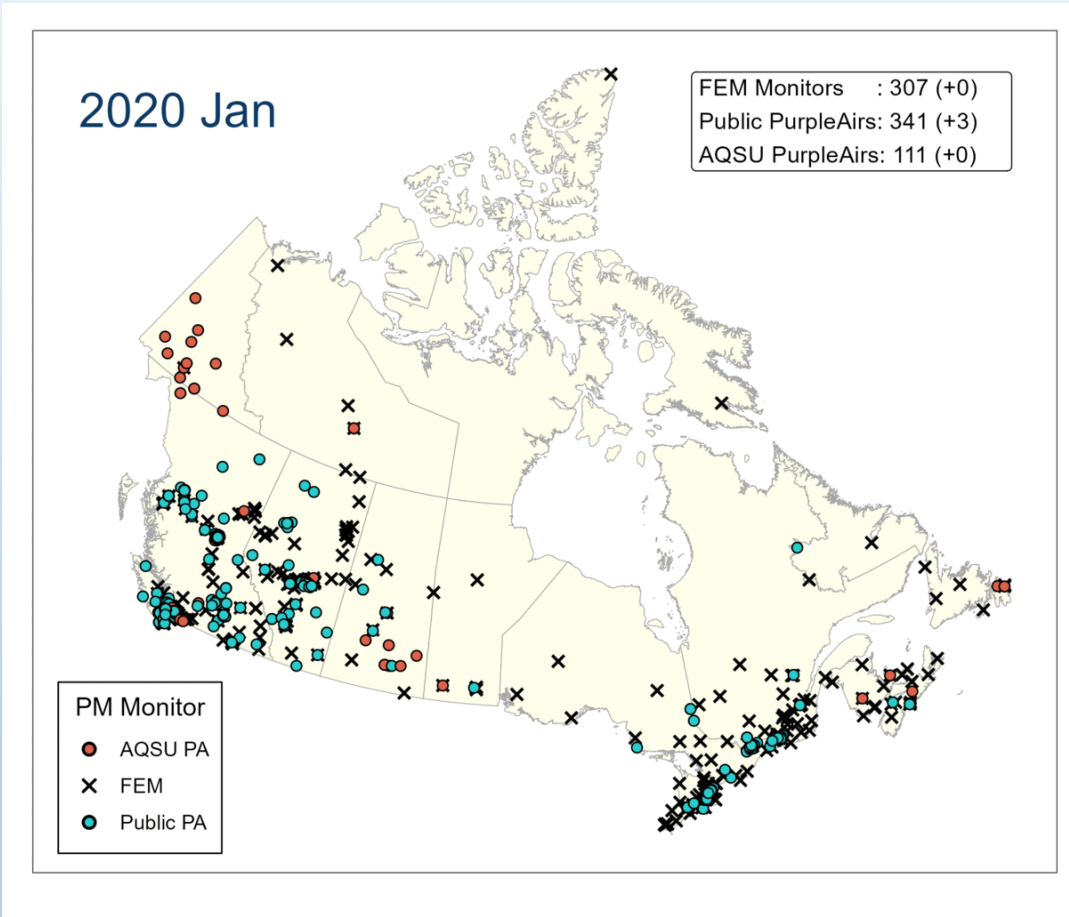

EER Dispersion Model Surface Smoke Simulation
(where a model thinks smoke from wildfires is on the surface)

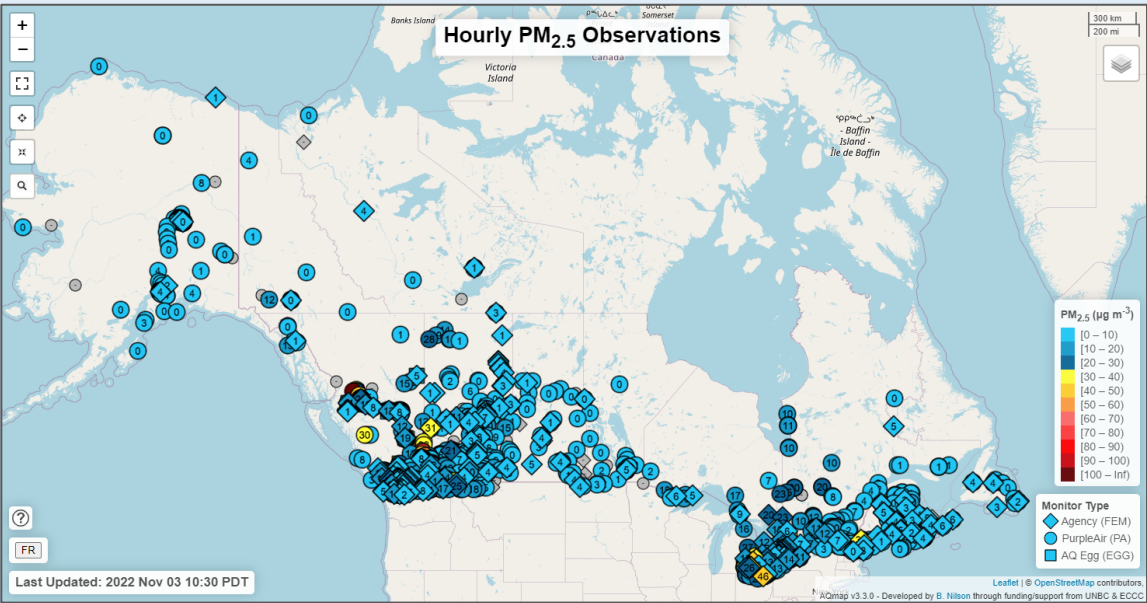

HMS Hand Drawn Smoke Density from Satellite Analyst
(where an expert thinks smoke is present, surface or not)

PM_{2.5} monitoring in Canada (FEMs and LCMs)

Usefulness of AQmap <https://aqmap.ca/aqmap/>

Current Status of LCM Pilot Project

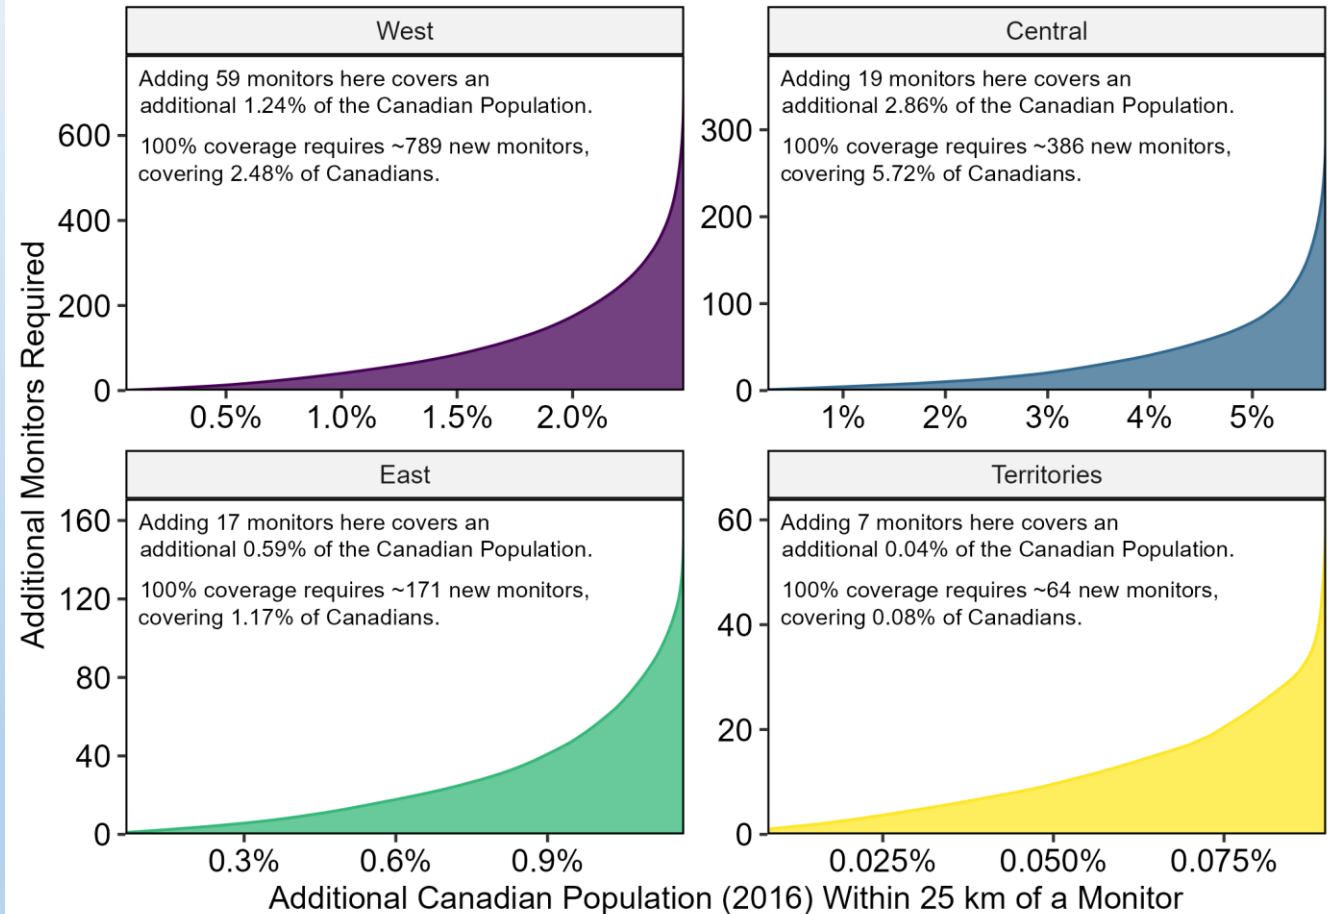

- With NAPS FEM network alone ~ 80% of the population of Canada was within 25 km of a PM monitor
- Including the LCM ~90% of the population of Canada is within 25 km of PM monitor
- Sept 30, 2023 – 306 FEM monitors, 1349 PA LCM (28.2% from ECCC)
- Forecast Zone Coverage Canada – FEM 27%, FEM & LCM 39%
- Forecast Zone Coverage West – FEM 24%, FEM & LCM 41%

What would it take to reach most of Canadian Communities

90.5% of Canadians had an FEM or PA within 25 km on Sep. 30, 2023

How can we cover the remaining 9.5%?

Region ■ West ■ Central ■ East ■ Territories

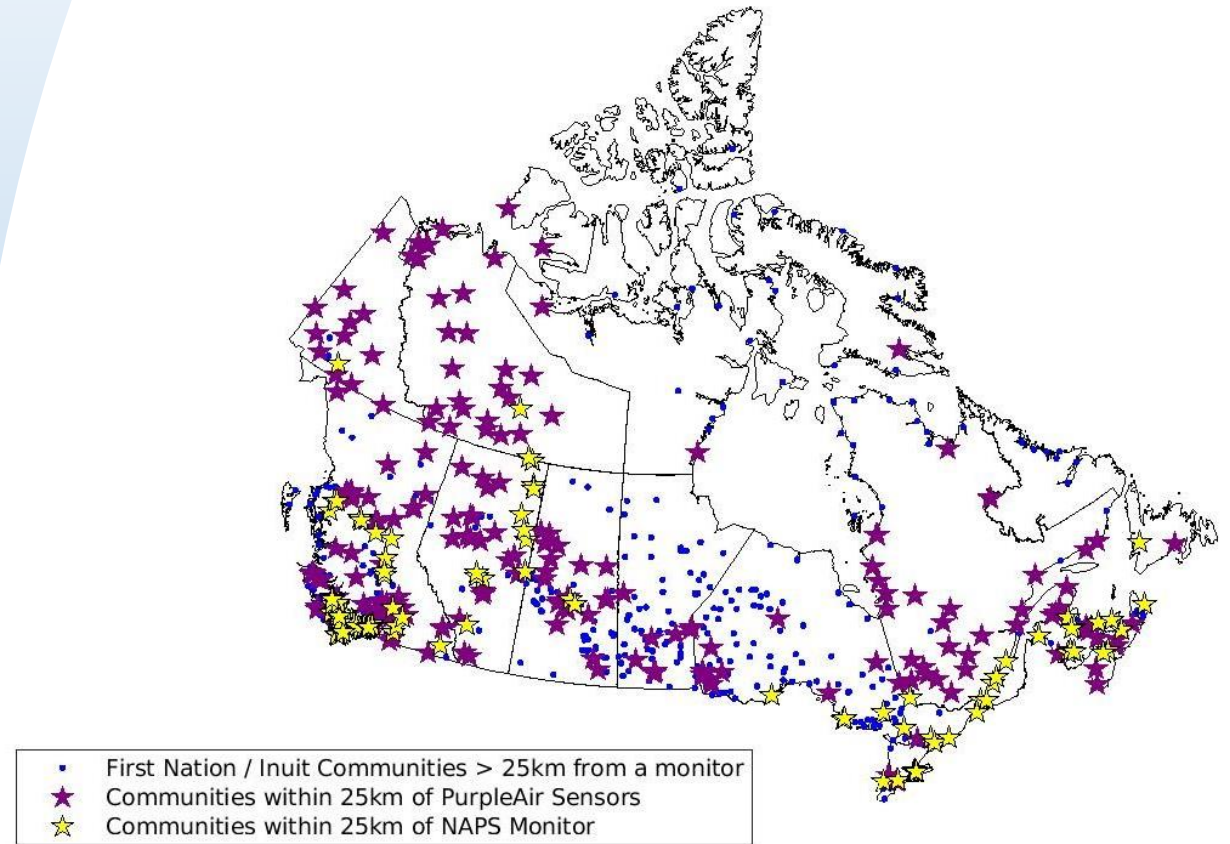

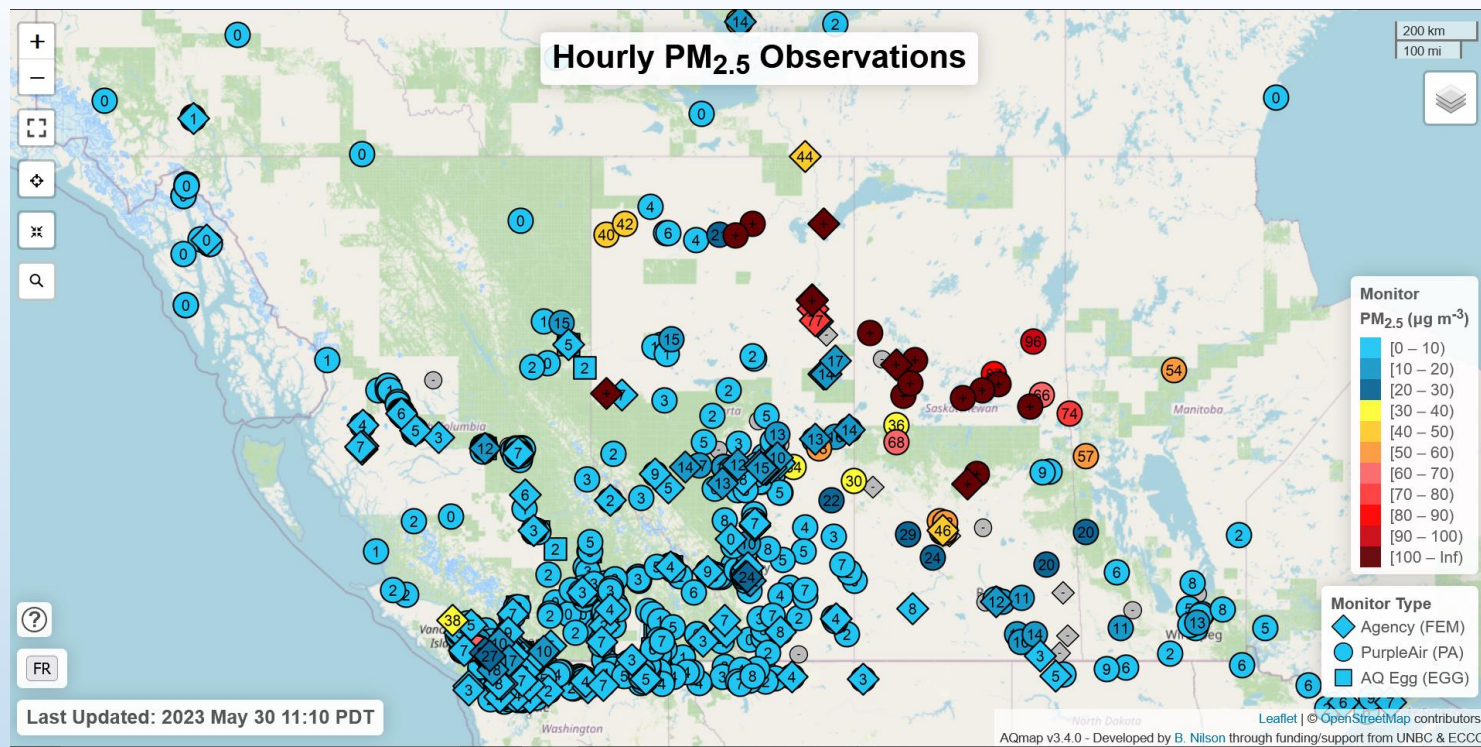

Approximate numbers of LCM required

Indigenous Communities

- 690 Inuit and First Nation Communities.
- 20.3% within 25 km of an FEM
- 49% within 25 km of LCM & FEM
- Focused area to improve

Low-Cost PM Sensors Fit For Purpose

- Shows areas of high PM
- Shows similar ranges to the FEM sensors
- Due to lower cost can provide spatial coverage to a larger area
- Shows impacts of high PM events such as forest fires
- Provides information to individuals, communities, and agencies where people live, work and play
